Sample Maternity HESI Practice Questions with Explanations
To help you get started, here are some sample questions covering key areas of maternity nursing.

Pregnancy and Antepartum Care
Q1: A pregnant woman at 28 weeks gestation reports visual disturbances and severe headaches. What should be the nurse's priority action?
a) Encourage rest and hydration
b) Assess fetal heart rate
c) Notify the healthcare provider immediately
d) Reassure her that these are common symptoms
Answer: c) Notify the healthcare provider immediately
Explanation: Visual disturbances and severe headaches in pregnancy can be signs of preeclampsia, a potentially life-threatening condition. Immediate assessment and intervention are necessary.

Labor and Delivery
Q2: During active labor, a patient's contractions are occurring every 2 minutes and lasting 90 seconds. The fetal heart rate is dropping to 90 bpm. What is the nurse's priority action?
a) Encourage the patient to change positions
b) Prepare for emergency delivery
c) Turn the patient on her side and administer oxygen
d) Document the findings and monitor
Answer: c) Turn the patient on her side and administer oxygen
Explanation: Fetal bradycardia with prolonged contractions suggests fetal distress. Turning the patient to a lateral position and administering oxygen can improve oxygen delivery to the fetus while further assessments are made.

Postpartum Care
Q3: A woman reports heavy vaginal bleeding and clots 24 hours after delivery. What should the nurse do first?
a) Assist her to the bathroom to void
b) Notify the healthcare provider immediately
c) Massage the fundus gently
d) Encourage her to breastfeed
Answer: c) Massage the fundus gently
Explanation: Heavy bleeding with boggy uterus indicates uterine atony, which can cause postpartum hemorrhage. Gentle fundal massage helps contract the uterus and reduce bleeding.

Neonatal Care
Q4: A newborn is assessed with a respiratory rate of 70 breaths per minute, cyanosis, and nasal flaring. What is the most appropriate initial action?
a) Suction the mouth and nose
b) Provide oxygen via nasal cannula
c) Initiate bag-valve-mask ventilation
d) Place the infant in a warmer
Answer: c) Initiate bag-valve-mask ventilation
Explanation: Signs of respiratory distress and hypoxia require immediate ventilation support to ensure adequate oxygenation.

Strategies for Answering Maternity HESI Practice Questions
Read each question carefully and identify what is being asked. Eliminate obviously incorrect options to improve your chances if guessing. Look for keywords like "priority," "most appropriate," or "best action," which guide your decision-making. Use clinical reasoning rather than relying solely on memorization. Apply the ABCs (Airway, Breathing, Circulation) in emergency scenarios.

Common Topics Covered in Maternity HESI Practice Questions
Prepare for questions across these essential areas:
Fetal development stages
Nursing care for high-risk pregnancies
Labor stages and management
Pain management during labor
Postpartum hemorrhage and uterine atony
Neonatal resuscitation
